AIMS & SCOPE

Aims and scope

Information Technology & People has a longstanding reputation for publishing up to date, interesting, relevant and provocative research which opens up new directions for academic research. It is a source for emerging ideas which broadens the understanding of information technology and its relation to people. The journal retains an openness to multiple paradigms of research including most forms of mainstream empirical work. It has an ongoing tradition of being an outlet for international, qualitative and critical research in information systems and particularly welcomes cultural and geographic diversity in studies of new and old technologies. It looks for ways to better understand how people collectively conceptualize, invent, adapt, define and use technology, as well as how they are constrained by features of it. We expect the focus of submissions to be on the specific role of technology in these areas rather than, for example, on brand consumption or human resource practices that happen to be supported by technologies.

INTERNET RESEARCH

AIM & SCOPE

Aims and scope

Internet Research is an international, refereed journal that aims to describe, assess and foster understanding of the role of wide-area, multi-purpose computer networks such as the Internet.

The Internet continues to gather influence and momentum, and it becomes increasingly important to be aware of the potential applications of this powerful resource throughout professional, political, personal and academic life. We therefore strongly encourage research that develops theoretical insights and understanding on topics and issues addressing the potential social, ethical, economic and political implications which arise from mass public access to information resources.
